

Children's seizures

Treating the convulsing child

Clear the airways

- Place the child on its side, head extended,
- Don't put anything in your mouth
- If necessary, aspirate throat secretions with a syringe adapted a probe inserted through the nostril.

Administer diazepam rectally

- Draw the required amount of diazepam into a syringe;
- Add 1 to 2 ml of water;
- Remove needle from syringe;
- Insert the syringe 1 or 2 cm into the rectum and inject the diazepam solution;
- Hold the buttocks together for a few minutes;
- If the solution is rejected immediately, repeat the injection.

Weight/Age	Diazepam to be administered rectal (10mg/2ml solution): 0.5mg/kg)
Less than 6 kg (2 to 4 months)	0.5ml
6 kg to under 9 kg (4 to 12 months)	0.8ml
9 kg to under 13 kg (12 to 30 months)	1.2ml
13 kg to under 18 kg (30 to 5 years)	1.7ml
