

SEVERE MALNUTRITION WITHOUT COMPLICATIONS

- Give amoxycillin for 5 days
- Ready-to-use ATPE therapeutic food for children over 6 months of age
- Advise mother child nutrition
- Evaluate possible TBC infection
- Explain to the mother when to return immediately
- See the child every week
- Give albendazole or mebendazole if the child is 12 months or older at the 4th visit
- Take charge of the child at the STA (refer to a nearby STA if the center has no STA)
